

# INTERNATIONAL & AMERICAN ASSOCIATIONS OF CLINICAL NUTRITIONISTS

## 2019 28TH ANNUAL IAACN SCIENTIFIC SYMPOSIUM SUMMARY

### **“Immunization, Inoculation or Vaccination; Navigating the Consequences with Clinical Nutrition”**

### **We will be Exploring Options for Helping Children and Adults Recover from Medicine Related Adverse Events.**

Children and adults who have sustained documented immunological, gastrointestinal, and neurological disruptions from simultaneous toxic exposures from medications, environmental influences, vaccinations, etc. are often ignored or misdiagnosed. As Clinical Nutritionists, what can we do to help?

When prescribing medications pharmacogenetically, factors are considered such as age of the patient, timing of exposure, genetic polymorphisms for detoxification, metabolic individuality, breastfeeding history, usage of antibiotics or other drugs, or co-morbid conditions such as allergies, asthma, or GERD before they are dosed. When they are not, the risk of side effects and suffering is greater. Today, this is the direction of individualized medicine. This should also be the standard for Board Certified Clinical Nutritionists who can be instrumental in supporting metabolic and detoxification pathways, remediating the consequences, and improving the lives of those people who have reactions to these accidental toxins. We, too, are obligated to do no harm while doing our best to facilitate the healing process for our patients who react aberrantly to simultaneous toxic exposures.

Join us for the 2019 IAACN Scientific Symposium, **Immunization, Inoculation, or Vaccination; Navigating the Consequences with Clinical Nutrition**, in Plano, Texas October 23rd through the 26th, where we will glean clinical pearls to help our clients/patients. By reviewing mechanisms of toxic injury, we can study biochemical, orthomolecular, herbal, and homeopathic methods of support for affected individuals, presented to us by renowned speakers.

**Kim Elia**, homeopath, will present “Homeopathy and Vaccinations,” **Kelly Halderman, MD, NMD**, “Amending and Maintaining a Novel Phase of Detoxification in the Vaccinated and Unvaccinated,” **Joe Veltmann, PhD, FAAIM, DCCN**, “Vaccinomics: A Personalized DNA-Directed Approach to Vaccines,” and **Richard Jaffe, Esq.** will present “Vaccination Law: Current Right in These Unsure Times.” **Hollie Resseguie PharmD and Col. Arden Andersen DO PhD, MScPH** will cover vaccine constituents and recommended vaccination schedules and their implications in human and animal health. **Steve Haltiwanger, MD, CCN** will talk about vaccine side effects as neurological injury, not behavioral problems. Also presenting will be **Jared Skowron, ND** with the Pediatric and Family Center for Natural Medicine in Wallingford, CT., will present Whether the child has a speech regression at 12-18months, or diagnosed with apraxia/dyspraxia, or simply have a speech delay, this lecture will give you the answers to help

children with autism speak more! Take home easy treatment protocols that you can use today to help these families that need your help and expertise!  
& **Adam Trainor, DC** will be presenting on hydrogen therapy for vaccine injured children and adults.
